

# Ice Harbor Dam - 1997 & 1998 Setup

## 3IH, 4IH, 5IH, 6IH, 7IH, 8IH, 9IH, & TIH

9IH - A1 2 antennas T-connected together, both in the top pool of the south ladder, one above and one below the v-weir for the trap.

9IH - A2 an underwater antenna in the forebay just outside the south ladder exit.

- For the antennas in the collection channel on sites 3-7 IH the inside antennas consist of two antennas T-connected together to form one "virtual" antenna. The two physical antennas are located on the opposite sides of the collection channel from each other, one along side the entrance and one directly opposite the entrance.
